With 2-image layout printing, 2 pages of print data are laid out for 1 ribbon panel, resulting in a process where2pages are printed at one time.
With the DS-RX1, 2-image layout printing is possible when using 6x8 or 5x7 media.
The method is explained here using 6x8 media as an example.
(When using 5x7 media, replace “6x4” and “4x6” with “5x3.5” and “3.5x5”*1 respectively for reference.)

*1. 2-image layout printing of 5x3.5 and 3.5x5 size is effective at firmware Ver 1.20 or later.

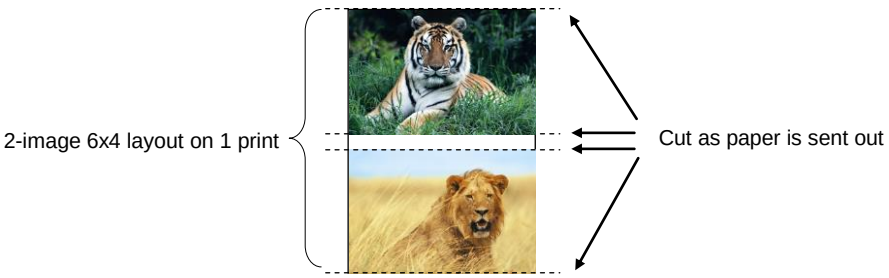

1. Printing 2-image layout

(1) Set 6x8 media in the printer.
(2) Set the printer driver media size to “(6×4)×2” or “PR(4×6)×2”.
(3) Send multiple images from the application.

Note）The dual image setting works on a job basis, so multiple pages can be printed in one job.

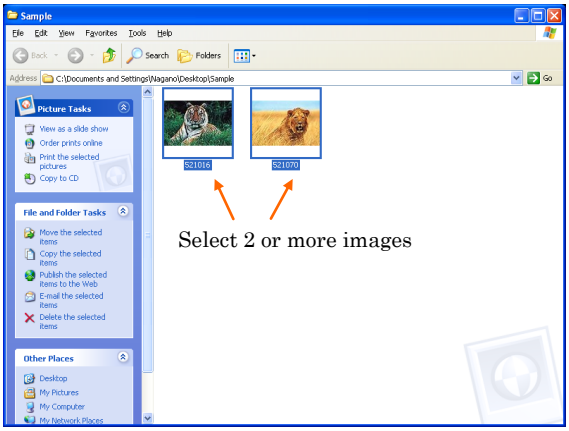

2. Printer operation

The printer prints 2 images at once, and the print is cut as it is fed out.
This happens for every 2 images. If an odd number of prints is designated, a 6×4 print is fed out for the last print. When this happens, one 6×8-size amount of ribbon is taken up.

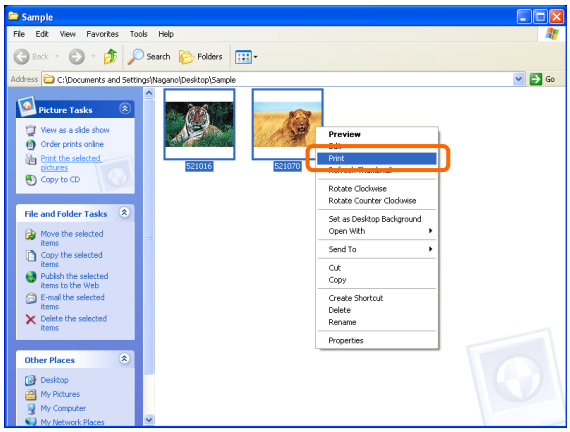

3. Example of Application Use

Step 1　Select 2 or more images.

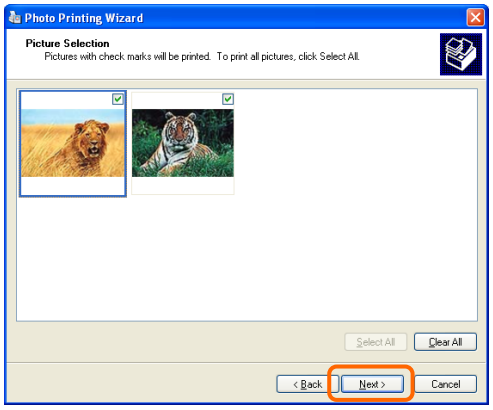

Step 2　Right-Click on the image, and from the pull-down menu select Print

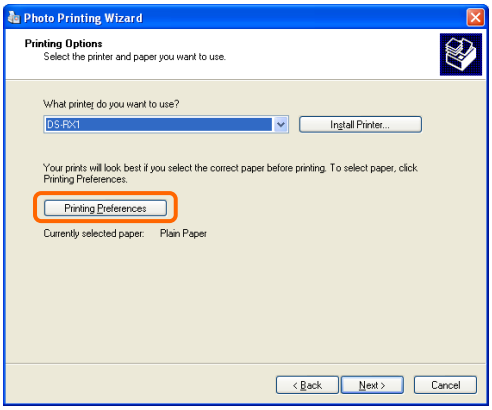

Step 3　Click on “Next”.

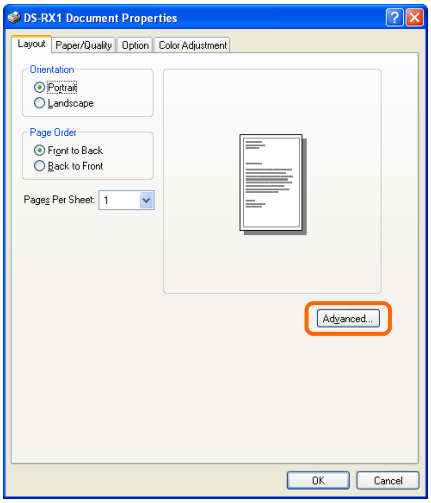

Step 4　Click on “Next”

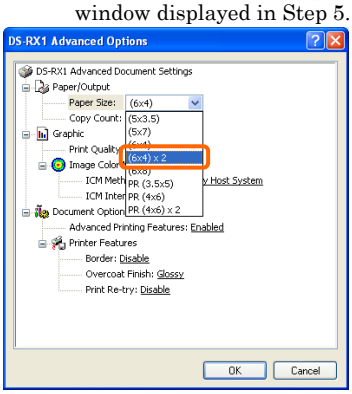

Step 5　Click on “Printing Preference”

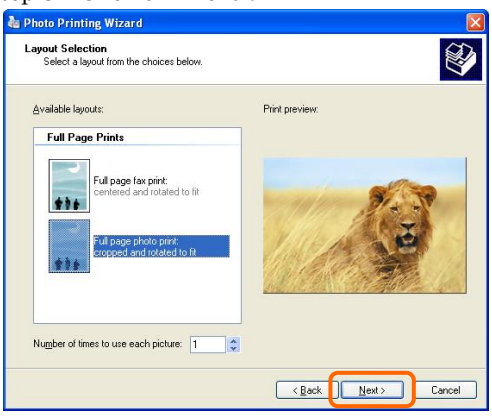

Step 6　Click on “Advanced”.

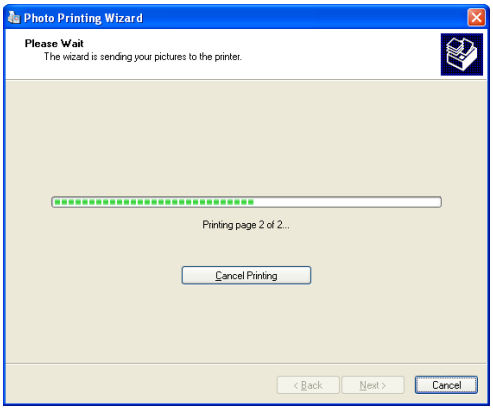

Step 7　Set the Paper Size to “(6x4)x2”.　Then click “OK” on the windows from steps 7⇒6, returning to the window displayed in Step 5.

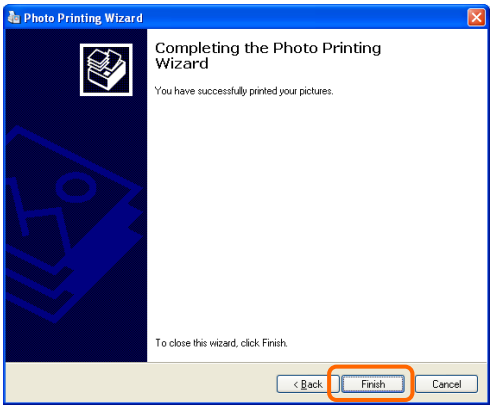

Step 8　Click on “Next”.

Step 9

Step 10 Click on “Finish”.

4. Sample Program Description

This is a summary explanation for dual image printing using a program. In both Visual C and Basic, when multiple pages are included in one job, the driver will lay out the dual images on one page, and outputs them to the printer.

(1) Sample of dual image layout using Visual C

To create multiple pages in one job, it repeats this process.

```
StartDoc()          Starts the print job
    ↓
StartPage()  ←──┐   Tells the printer driver to accept a new page
    ↓           │
    :           │   painting
    ↓           │
EndPage()    ───┘   Informs the device that writing of 1 page is complete
    ↓
EndDoc()            Ends the print job
```

(2) Sample of dual image layout using Visual Basic 6.0

```
With Printer            Starts the print job

    .PaintPicture       paints the first page
    .newPage            enters a new page for the print job
    .PaintPicture       paints the second page

    .EndDoc             Ends the print job

End With
```
